COLD VS FLU

It is that time of year when viruses circulate in full force. Here is some information to help you with the fight against these viruses.

Colds and Influenza are similar in some ways, and very different in others. Both are viruses that can make you feel very miserable, but Influenza has a tendency to make people, especially children and the elderly, much sicker. Colds also, can actually appear anytime of the year, whereas “flu season” is usually anytime from October through May.

Another virus that can get confused with Influenza is the “stomach flu”. This is actually a gastro-intestinal illness that can cause nausea, vomiting, and diarrhea—but is not a respiratory illness. This can also occur throughout the year.

So what is the difference between a COLD and INFLUENZA?
Below are some characteristics of both:

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>COLD</th>
<th>INFLUENZA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Runny Nose</td>
<td>Yes</td>
<td>Sometimes</td>
</tr>
<tr>
<td>Sneezing</td>
<td>Yes</td>
<td>Sometimes</td>
</tr>
<tr>
<td>Cough</td>
<td>Yes</td>
<td>Yes--often Dry</td>
</tr>
<tr>
<td>Sore Throat</td>
<td>Yes</td>
<td>Sometimes</td>
</tr>
<tr>
<td>Body Aches</td>
<td>Yes</td>
<td>Severe--all over</td>
</tr>
<tr>
<td>Nausea</td>
<td>Mild--head and body</td>
<td>Sometimes</td>
</tr>
<tr>
<td>Fever</td>
<td>No</td>
<td>Usual and Higher lasting</td>
</tr>
<tr>
<td>Fatigue</td>
<td>Sometimes--lowgrade</td>
<td>several days</td>
</tr>
<tr>
<td>Complications</td>
<td>Sinus infection; ear infection</td>
<td>Yes--can last 2-3 weeks Sinusitis; pneumonia; bronchitis; death</td>
</tr>
</tbody>
</table>

Precautions that you can take that may help keep your family from getting sick:
1. Get a Flu shot
2. Wash Your hands, wash your hands, wash your hands
3. Disinfect your office, home, phone, keyboards etc
4. Get enough sleep
5. Stay Hydrated
6. Exercise

If you or a loved one, does get hit with a Cold or Influenza, be sure and stay home to slow the spread, and seek medical help, if needed.

Have a Happy and Health New Year!
Sherry L Adams

**Long-Term Follow Up for Infants Diagnosed with a Disorder After Screening**

The North Dakota Newborn Screening Program began with screening for PKU in 1964. Since that time, the program has grown to screen for almost 50 rare but serious conditions in newborns.

North Dakota Newborn Screening Program is starting Long-Term Follow Up for infants diagnosed with a disorder after screening. The purpose is to provide guidance and some care coordination to families as they adjust to the diagnosis and all the testing/treatment that may go along with this.

The Newborn Screening Program is now located within Special Health Services (formerly Children Special Health Services) and is working closely with the other programs in this section to ensure that these families have timely access to the care they need.

Click [here](nbs.health.nd.gov) for information on the national program.

**Expanding Tobacco Treatment Services in Rural Areas**

North Dakota’s population is 50 percent rural. Tobacco users in rural areas are a priority population that need increased access to tobacco treatment.

West River Health Services in Hettinger and Emmons County Public Health in collaboration with Linton Hospital and Clinics have enhanced their tobacco treatment services. A nurse practitioner from each site attended a Tobacco Treatment Specialist training to counsel tobacco users. The providers will incorporate screening for tobacco...
use, motivational interviewing to assess tobacco addiction, and assisting patients to develop their quit plans. Preventing relapse begins before you even stop using tobacco. Tobacco users double their chance of quitting with behavioral counseling and nicotine replacement therapy.

The training is funded by the [North Dakota Department of Health NDQuits Cessation Grant Program](#).
