Whereas North Dakota is the leading binge drinking state measured by the largest number of
drinks consumed on an occasion in the past 30 days among adults who reported binge
drinking (5.9), and is still the 3rd leading binge drinking state among adults, with a
prevalence of 22.7% of adults aged 18 or greater, trailing only Iowa and Wisconsin\(^1\);

Whereas North Dakota is a state that values life, and yet North Dakota ranks as the #47 worst
state for alcohol deaths, with 17.2 deaths per 100,000, which is twice the national average
of 9.9; and this number has increased by 58% from 2005 (10.9) to 2018 (17.2) \(^1\);

Whereas alcohol is responsible for substantial societal and personal harm,\(^2,3\) and chronic
excessive alcohol use contributes directly to cardiovascular disease,\(^4\) nutritional
deficiency,\(^5\) cancer,\(^6\) accelerated aging,\(^7\) gastrointestinal deaths, liver cirrhosis in younger
adults,\(^8\) injuries, and alcohol use disorders\(^2\);

Whereas among all U.S. cirrhosis deaths in 2015, approximately 49.5% were related to alcohol
use and occurred in younger adults ages 25-34,\(^9\) so this is a health concern for all ages;

Whereas there is increasing evidence that there is no level of alcohol intake that is considered
beneficial to health\(^10\);

Whereas underage drinking is a common problem, including businesses failing compliance
checks regarding selling alcohol to minors\(^11-13\);

Whereas alcohol remains low cost and is become more affordable, not less,\(^14\) despite global
evidence that alcohol per capita consumption is associated with affordability,\(^15\) and the
alcohol industry indiscriminately promotes its products to increase sales, without being
held responsible for the personal and societal harm caused by alcohol misuse\(^16\);

Whereas persistently high levels of alcohol harm create a heavy social, economic, and health
burden. For example, one in every 10 deaths in the European region is caused by alcohol
every year, and nearly one in every four deaths among young adults aged 20–24 years is
due to alcohol products\(^17\);

Whereas the COVID-19 pandemic resulted in loss of purpose for many people, loss of jobs, and
being required to work from home, so that drinking during the day increased; and it
became easier to purchase alcohol, including curbside pickup, resulting in a 25% increase in
alcohol-related deaths in 2020\(^18\);

Whereas alcohol is a psychoactive substance and a known carcinogen, which causes substantial
harms to alcohol users, their families, communities, as well as societies and economies in
general, it is far less regulated than tobacco, including the regulations of the level of
taxation;
Whereas alcohol consumption is considered a social norm, resulting in many people in society resisting any restrictions on alcohol, so that alcohol taxes have been under-utilized as a public health measure. North Dakota’s excise tax is $0.50/gallon for wine, $0.16/gallon for beer, and $2.50/gallon for liquor, ranking 32nd, 34th, and 28th in the United States\(^1\); whereas the state of Washington has the highest alcohol excise tax, with $33.22 per gallon for liquor; and is among the states with the lowest prevalence of binge drinking (15.4%), and the lowest number of drinks consumed when drinking (5.3)\(^1\); whereas the CDC Community Preventive Services Task Force has ranked increasing alcohol excise taxes to prevent excessive alcohol use and other harms as an evidence-based best practice, with the ability to decrease total alcohol consumption by 7.7% for every 10% increase in price\(^2\); whereas people consistently value health as the most important condition for a happy and flourishing life,\(^2\) and while alcohol is known to increase the feeling of social cohesiveness; in fact, excess alcohol consumption compromises health, happiness and human flourishing to a great degree; and whereas Governor Doug and First Lady Kathryn Burgum have established the Recovery Reinvented program to eliminate the shame and stigma of addiction in North Dakota and to help all persons in North Dakota to prevent chemical misuse from beginning, treat addiction for all persons seeking help, and support a life of recovery; now, therefore, be it

**Resolved**, that the North Dakota Public Health Association, on behalf of its members recommends:

1. increase the excise tax on beer in bottles and cans from $0.16/gallon to $0.26/gallon, wine from $0.50/gallon to $0.87/gallon, and liquor from $2.50/gallon to $14.27/gallon; in addition to all federal excise taxes;
2. the North Dakota legislature conduct a study to determine a cost recovery approach to cover the costs of alcohol harms to society;
3. the legislature to make alcohol-related policy decisions from a Health in All Policies perspective.
4. decrease the density of alcohol sales outlets;
5. reduce the hours and the days of alcohol sales;
6. forbid direct to consumer advertising of alcohol products;
7. increase the visibility of “alcohol can cause serious harm” messaging on alcohol product packaging;
8. require Responsible Beverage Service (RBS) training as a condition of on-sale alcohol sale licensure; and
9. fund alcohol compliance checks to reduce youth access to alcohol.
